PROFESSIONAL SUMMARY

Java Backend Developer (B.E. CSE, 2026, CGPA 7.9) with hands-on internship experience building CRUD-based applications using Core Java, OOP, JDBC, and MySQL. Comfortable working across the deployment pipeline with Docker, Linux shell scripting, and CI/CD workflows in GitHub Actions and GitLab CI, alongside AWS Cloud Fundamentals knowledge of EC2, S3, and IAM. Seeking an entry-level Java Developer or Java Backend role with DevOps exposure to build and ship reliable, scalable backend systems in an agile team.

TECHNICAL SKILLS

Languages: Java (Core & Advanced), Python (Basic), SQL

Java & Backend: OOP, Collections Framework, Exception Handling, Multithreading, JVM, JDBC, DAO Pattern

Database: MySQL, Database Design, Normalization, Parameterized Queries

DevOps & CI/CD: Docker, GitHub Actions, GitLab CI, Linux/Shell Scripting, Git, GitHub

Cloud: AWS Cloud Fundamentals (EC2, S3, IAM, Cloud Architecture Basics)

Web Technologies: HTML5, CSS3, JavaScript (Basic)

Tools & IDEs: Eclipse, IntelliJ IDEA, VS Code

Methodologies: SDLC, Agile (Scrum), Requirement Analysis, Incremental Development

EXPERIENCE

Full Stack Java Developer Intern — Pankaj Sir Academy *Jan 2026 – Present*

Bangalore

- Developed and deployed 3+ Java applications with full CRUD functionality using JDBC and MySQL, reducing data retrieval time through optimized SQL queries.
- Engineered modular, maintainable Java modules applying OOP principles (inheritance, polymorphism, encapsulation), enabling 40% faster code reuse across projects.
- Implemented robust exception handling and input validations, reducing runtime errors by an estimated 60% in practice tasks.
- Used Docker and Linux shell scripting to containerize and run practice applications consistently across environments.
- Collaborated with peers using Git for version control, managing branches, commits, and pull requests in a simulated agile sprint environment; explored GitHub Actions/GitLab CI for automated build and test workflows.
- Followed Agile Scrum methodology: participated in stand-ups, sprint planning, and iterative delivery of feature modules.

PROJECTS

Personal Expense Tracker *Java · MySQL · JDBC · Docker*

- Built a desktop Java application enabling users to record, categorize, and view income and daily expenses with persistent MySQL storage.
- Designed a normalized 3-table database schema (users, categories, transactions) and implemented parameterized SQL queries via JDBC to prevent SQL injection.
- Applied OOP design patterns (encapsulation, DAO pattern) to separate business logic from data access, improving maintainability and testability.
- Containerized the application with Docker for consistent local setup and portability.

Student Management System *Java · MySQL*

- Created a console-based system to manage student academic records — add, update, delete, and search students by roll number or name.
- Implemented custom exception classes for edge cases (duplicate entry, record not found), significantly improving error traceability.
- Strengthened understanding of relational database design by implementing foreign key relationships and enforcing referential integrity constraints.

CERTIFICATIONS

- Java Programming Certification — Core Java, OOP, Collections, Exception Handling
- SQL & Database Fundamentals — Relational databases, Normalization, Query Optimization
- AWS Cloud Fundamentals — EC2, S3, IAM, Cloud architecture basics

EDUCATION

Bachelor of Engineering — Computer Science & Engineering *June 2026*

BGS Institute of Technology, Bangalore • CGPA: 7.9 / 10

Relevant coursework: Data Structures, Algorithms, DBMS, Operating Systems, Software Engineering
